

NetShelter CX Fan Booster Kit

What is the NetShelter CX?

The NetShelter CX is a soundproofed server room in a box which allows for IT deployment wherever and whenever it is needed, saving space, cost and deployment time.

What is the Fan Booster Kit?

The number of physical servers deployed is changing due to virtualization and cloud computing. This leads to more compact denser IT platforms, which can put a strain on existing cooling systems.

The NetShelter CX keeps equipment comfortable at efficient operating temperatures by providing a powerful stream of cool ambient air right where the equipment needs it, at the front, and by removing the exhaust air from behind, quickly and quietly returning it to the large office space.

This NetShelter CX Fan Booster Kit essentially boosts the speed and power of the air moving through the system, thereby increasing how much equipment can be put inside or increasing the handling capacity for more powerful, denser IT architectures, such as blade servers.

What difference does it make?

The effects of the Booster Kit can be dramatic. Here's a chart showing the increases which can be expected.

Model	Number of Boost Kits			
	Standard	1	2	3
NetShelter CX 18U	1.2kw	2.4kw		
NetShelter CX 24U	2.4kw	2.9kw	3.5kw	
NetShelter CX 38U	3.6kw	4.1kw	4.5kw	5.0kw

How can I fit it?

The Kit comes with all the parts you need to install the replacement Fan Tray and Power Supply Unit. It can be fitted to a NetShelter CX before installation of equipment, or afterward to a NetShelter CX already in the field.
