

**EcoStruxure IT Infrastructure Assessments:**

Get the visibility you need to **help your customers optimize their virtual environment** and determine if they should migrate their IT to the cloud or stay on-premise in minutes with our new IT software, EcoStruxure IT!

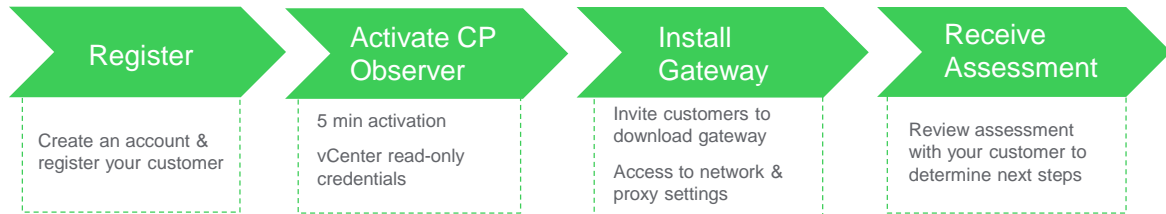

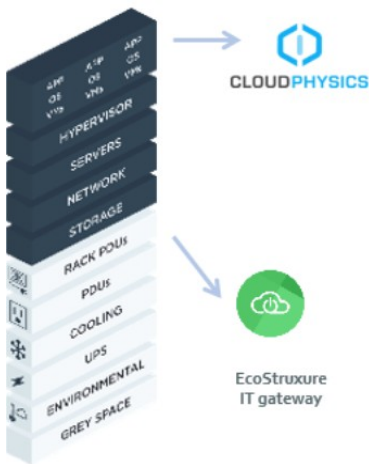

**EcoStruxure IT** is a SaaS based assessment that will give you visibility into your customer's:

- **Virtual environment**
- **Physical infrastructure** (UPS, PDU, & Cooling)

The combination of data from both environments gives you a holistic view of how your customers are **consuming their virtual IT** and the **effect it has on their physical infrastructure**, both of which are typically over provisioned leading to inefficiency and higher operating costs.

**Get Started Today!**

**Assessment Report Benefits**

Perform an assessment to quickly get the actionable intelligence you need to **enable meaningful discussions about the best way to optimize your customers' entire environment** and address their specific business problems.

1. **Virtual Environment Optimization-** Save your customer's money by helping them right-size their infrastructure
2. **vSphere 6.5 Readiness-** Determine your customer's exposure to vSphere 5.X (End of Support in September 2018)
3. **Viability of Migration to the Cloud –** Determine the viability to migrate your customer's IT to the cloud, what assets to migrate, and the costs
4. **Understand your Physical Infrastructure –** Understand your customer's power and cooling devices (UPS age & efficiency, battery age, cooling performance, etc.)
